## *What we have been up to recently*

### **Hybrid citizen engagement approaches to deliver citizen-led project results in times of a pandemic**

The COVID-19 pandemic poses challenges to Citizen Science engagement approaches but also showcases the potential of online or hybrid approaches to reach a bigger audience. **WeCount's first Policy Brief** builds upon the Citizen Science approach and methodology employed by the project, focusing on its shift from face-to-face to hybrid interactions and how the citizen-science and concept employed can help to tackle challenges brought about by COVID-19.

## Science made from your window: Belgian and Spanish WeCount pilots are underway!

Two of WeCount's citizen science pilots are now moving forward in Belgium (Leuven) and Spain (Madrid/Barcelona), involving 400 households. Citizens were given sensors to be mounted in their household's windows to quantify local road transport and the speed of cars, large vehicles, cyclists and pedestrians. Hybrid events took place to guide them through the process.

### **The People have Spoken: WeCount featured in the Thinking Cities Magazine**

WeCount is featured in the latest issue of the **Thinking Cities Magazine**, released in mid-July. The article focuses on how Citizen Science projects such as WeCount and the use of Telraam by engaged citizens proved essential in monitoring urban mobility patterns during the COVID-19 lockdown in Belgium.
